Art Unit: 1625

#### **DETAILED ACTION**

1. Claims 19-33 are pending. Claims 1-18 have been canceled according to the preliminary amendment filed on 9-12-2003.

## Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 19-33 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 19, 'eating disorders', 'sexual dysfunction' are unclear since they are general classes of disorders embracing opposing and conflicting conditions. For example, 'eating disorder' would encompass both hyperphagia and anorexia, and 'sexual dysfunction' would embrace the conditions involving both the inhibitory and stimulatory sexual behaviors. What are the intended metes and bounds of these disorders/conditions? The rejection is applicable to claims dependent on claim 19.

#### Claim Rejections - 35 USC § 112(1)

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 19-33 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. \*\*\*.

Art Unit: 1625

## a. Nature of the invention.

The instant invention is drawn to the method of using a dihydro-[1,4]dioxino[2,3-b]pyridinyl compound in the treatment of obesity, eating disorders, vasomotor flushing, cocaine addition, alcohol addiction or sexual dysfunction.

b. State of the prior art and the level of the skill in the art.

5-HT receptors are known to have subclasses differing in their structures, regional distribution, pharmacology, modes of actions, and functions (Wijngaarden, Recl. Trav. Chim. Pays-Bas, 1993, 112:126-130; Barnes et al. Neuropharmacology, 1999, 38: 1083-1092, pages 1085-6). While 5HT<sub>1A</sub> receptor has been implicated in many physiological responses, and 5HT<sub>1A</sub> receptor agonist has been shown to have anxiological and antidepressant activity, the nexus between obesity, eating disorders, vasomotor flushing, cocaine addition, alcohol addiction or sexual dysfunction and 5HT<sub>1A</sub> receptor has not been fully established. For example, while 5HT<sub>1A</sub> receptor agonist evokes hypothermia, inhibition of 5HT synthesis and 5-HT lesions do not prevent hypothermia when the agonists are injected in rats (Barnes, page 1092). Some of the responses elicited by a 5HT<sub>1A</sub> receptor agonist, 8-OH-PAT, such as hyperphagia (Fletcher et al. Psychopharmacology, 1990, 100(2): 188-94, abstract), altered sexual behavior (Matuszewich et al. Brain Research 1999, 820(1-2): 55-62, abstract), are not reversed by a 5HT<sub>1A</sub> receptor antagonist, thereby suggesting that these effects are not mediated by the 5HT<sub>1A</sub> receptor.

The level of the skill in the 5- $HT_{1A}$  receptor ligand art is high.

c. Predictability/unpredictability of the art.

The high degree of unpredictability is well recognized in the 5-HT receptor ligand art. A slight change in the structure of the compound would drastically alter its affinity and selectivity (Wijngaarden, Recl. Trav. Chim. Pays-Bas, 1993, 112:126-130, pages 129-130, Fig. 6, Fig. 7, Fig. 8).

d. Amount of guidance/working examples.

Preparation of example compounds has been described.

The procedures for the 5-HT transporter binding assays,  $5\text{-HT}_{1A}$  receptor binding assays, and the assay for the assessment of the antagonist activity, are found on pages 31-32 of the specification. Results are shown for Examples 1-4.

No in vivo procedures are described.

Art Unit: 1625

### e. The breadth of the claims.

Applicant's assertion that all the inventive compounds would be effective in treating obesity, eating disorders (including the conflicting hyperphagia and anorexia), vasomotor flushing, cocaine addition, alcohol addiction or sexual dysfunction (including the conditions involving the opposing inhibitory and stimulatory sexual behaviors) does not commensurate with the scope of the objective enablement, especially in view of the high degree of unpredictability in the art, the limited working examples and the non-establishment of the nexus between the antagonism of 5HT<sub>1A</sub> receptor and these recited conditions (paragraphs b, c, d above).

f. Quantitation of undue experimentation.

Since the instant 'eating disorders', 'sexual dysfunction' etc. are general classes of disorders embracing opposing and conflicting conditions, it is impossible to use a single 5HT<sub>1A</sub> receptor antagonist compound of the instant to treat all these contradictory conditions (see paragraph 2 above). Furthermore, in view of the high degree of unpredictability in the art, the limited working examples and the fact that the breadth of the claims does not commensurate with that of the objective enablement, the disclosure as presented would not allow one of ordinary skill in the art to use the invention as claimed without undue experimentation (paragraphs b-e above).

## **Double Patenting**

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Application/Control Number: 10/661,182 Page 5

Art Unit: 1625

Claims 19-33 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 14-17 of U.S. Patent No. 6656950. Although the conflicting claims are not identical, they are not patentably distinct from each other. The instant method was part of the original claims in the parent application that matured into 6656950, and it is not a result of a restriction requirement of the parent application.

#### Conclusion

- 5. No claims are allowed.
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Evelyn Huang whose telephone number is 571-272-0686. The examiner can normally be reached on Tuesday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph McKane can be reached on 571-272-0699. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
